

Fantom™

Flow Control

Fantom™

Flow Control

4 standard sizes

Customizable ID and OD

Easy Installation/ Activation

ISO/API validated

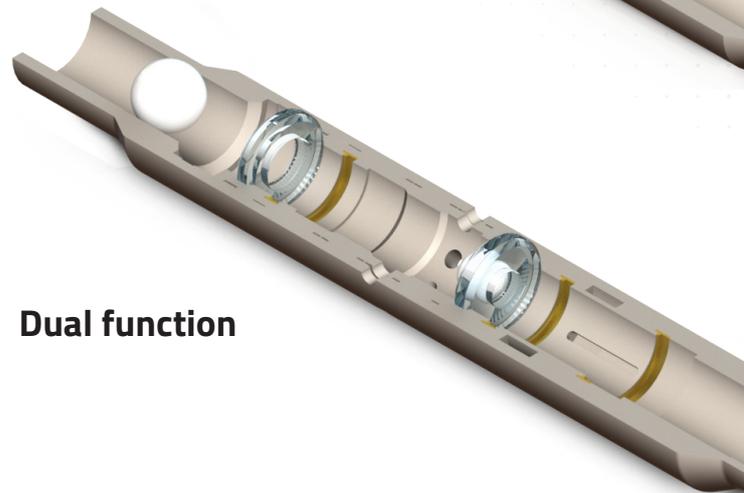

Max 15000 psi

Max 320°F

Single function

Dual function

The Fantom™ Shatter Ball Seat is the perfect solution to include in a sliding sleeve used for flow control during well completion and stimulation. It will regulate or control fluid flow between the reservoir and the well bore in either an open to close or close to open configuration, just like traditional legacy options. Even greater control is achieved by combining with a second Fantom™ SBS which allows both open to close and close to open configurations.

Once this process is completed, the Fantom™ SBS is easily opened remotely without intervention, resulting in genuine full-bore ID and a reduction in rig time. This dramatically improves efficiency while increasing safety and profitability
